SR Relays
Basic to Enhanced Upgrade

Upgrade your SR Basic to a newer, more advanced SR Enhanced Relay

UPGRADE

Consider upgrading your current SR Systems, to a newer, more advanced version. Take advantage of additional benefits not available with older versions of the SR Systems. Send us your old SR Basic System and we will implement, at your choice, one or all of the following updates:

- Replace internal boards with the latest hardware version
- Environmental protection to the electronic boards of your SR System by applying conformal coating for chemically harsh environments

- Replace the old face plate with the newer enhanced version
- Install new options
- Upgrade the relay firmware to the latest version
- Full test and calibration

KEY BENEFITS

- 2 Year Service Warranty
- Extend the life expectancy of your SR System when installed in chemically harsh environments
- Additional memory for future implementation of new features
- Future firmware upgrades not compatible with older hardware versions

FEATURES

- Best in class man machine interface (MMI) - Large backlit display with 40 characters to view relay information and settings in direct sunlight, full numerical keypad, and setpoint navigation keys.
- Re-designed keypad and menu structure
- New communication protocols - Modbus RTU over TCP/IP, Profibus & Device Net interface available.
- New Ethernet capabilities to drastically increase communication speed and data transfer rates between the SR Relays and the Local Operation Interface or Remote SCADA System.

Expanded memory for:

- Sequence of event recorder - between 256 and 512 timestamped events, depending on the SR Product
- Waveform capture - more waveform capture events with more samples of data
- Data Logger - Variable sampling rates and more data stored in the relay memory
