GE Vernova launches startup ThinkLabs AI, Inc.

CAMBRIDGE, Mass. (May 23, 2024) - [GE Vernova](#) Inc. (NYSE: GEV) today announced it has launched ThinkLabs AI, Inc., a new startup focused on developing technology to help enhance grid planning through a combination of intelligent automation and AI. ThinkLabs is the first startup to be launched from GE Vernova. This move highlights the company's commitment to enhancing the speed at which it brings energy transition innovations to customers.

“Our customers and the vital energy challenges we’re solving for demand relentless innovation,” said [Limor Spector](#), **President of Ventures and Incubation for GE Vernova**. “This initial early-stage investment highlights one of the many ways we are committed to developing an innovative ecosystem in support of changing the trajectory of climate change.”

ThinkLabs is the result of an incubation effort launched by GE Vernova's Electrification Software business and led by [Josh Wong](#). During his time at GE Vernova, Wong focused on the application of disruptive technologies to help improve the way electric utilities manage, balance, optimize, and coordinate the grid. Wong has left GE Vernova to lead ThinkLabs as its chief executive officer.

ThinkLabs was pre-seeded with an initial early-stage investment by GE Vernova. An additional first-time seed-stage investment of \$5 million was co-led by Powerhouse Ventures and Active Impact Investments. Other participants in the round included Blackhorn Ventures, Amplify Capital, Mercuria Energy, and a national US energy company. The company will be privately owned by its founders, GE Vernova, and the other investors.

The software application ThinkLabs is developing uses a combination of intelligent automation and AI to help enhance grid planning. The early-stage application, which is leveraging external funding partners to accelerate development, is planned to complement GE Vernova's GridOS[®] software portfolio. The GridOS portfolio is comprised of a platform and suite of AI and Power Systems-based applications designed to help enable secure, reliable grid orchestration while delivering the resiliency and flexibility utilities need to modernize and transform to a more sustainable energy grid.
