

C7 Series

# MV Induction Motor

2-12 Poles, 50/60Hz, up to 9000 HP.

High power density

High efficiency

Low vibration

Low noise

## More power in a smaller package

### Built on extensive rotating machine experience.

GE manufactured motors and generators for some of the first commercial and industrial electrical applications. We continue to deliver innovative electrical and mechanical power solutions to the world. Our machines efficiently operate in challenging applications and severe environments where reliability and ease of maintenance is critical.

### Innovations pack more power in a smaller frame.

A specially-designed frame and stator in the C7 that cools so effectively, that higher power ratings are easily achieved by smaller frame sizes. This motor is ideally suited in applications where space is at a premium and in platforms where less weight is required.

### Fast builds with pre-engineered components.

The C7 features a standard set of frame, rotor and stator components that can fit into the majority of common application configurations. This means a faster cycle time to build and more consistent performance results during operation.

### Quick selection with catalogue product.

Standard-built C7 squirrel-cage induction motors operate at 50/60 Hz, with outputs ranging up to 6,000 kW (9000 HP).

- Designed for direct-on-line or VFD applications.
- Rated Ex for use in a hazardous location.
- Welded totally enclosed frame construction with air, water and blower-mounted cooling. WPII enclosure also available.
- IP 55 standard protection for TEAAC (CACA) or TEWAC (CACW).
- IP24 standard protection for WPII enclosures.

# Innovative electro-mechanical design

## Benefits

- Small footprint due to high power density.
- High efficiency to assist with energy savings.
- Low vibration enables high reliability and MTBF.
- Low noise level to reduce environmental impact.

## Technical features

- Adheres to NEMA MG1 or IEC 60034.
- Available for API 541 5<sup>th</sup> Edition.
- S1 duty (S2 to S9 duty types optional).
- 50/60 Hz frequency.
- 2,300 to 13,800 V (other voltages optional).
- Class F insulation.
- ≤ 1000 meter altitude.
- -18°C to +40° C ambient.

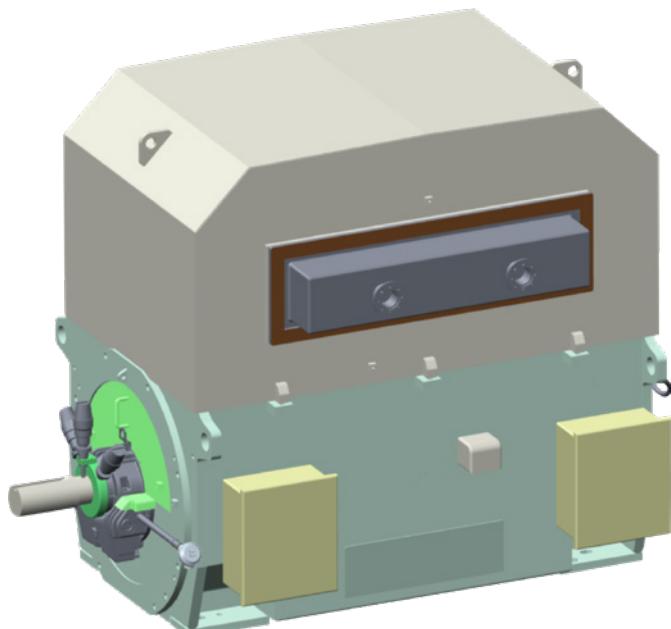

Note: Other voltages, higher altitude or ambient will require engineering evaluation and design customization.

- Class B winding temperature rise by RTD method.
- Maximum torque limitation – Bi-phase short circuit condition is considered for the winding, shaft and frame. (Fast bus transfer torque may be verified upon request).
- Vibration levels compliant to American Petroleum Institute (API), IEC 60034 Grade B and NEMA specifications.
- Low Noise

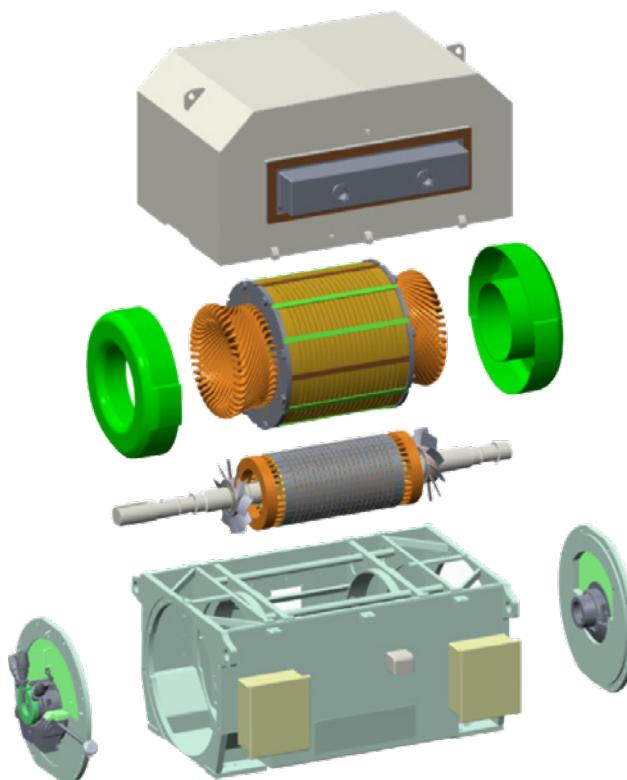

TEWAC: Average sound pressure of 80 dB(A) max at 1 m no load.

TEAAC/WPII: Average sound pressure of 85 dB(A) max at 1 m no load.

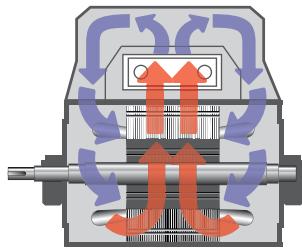

Lower dB(A) levels are available upon request.

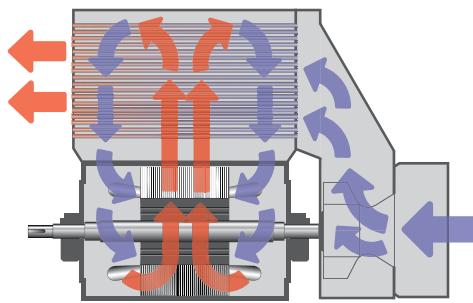

Innovative cooling tops quickly exchanges heat away from the core.  
Rigid frame construction helps keep noise levels low.  
IEC 60034 Grade B.

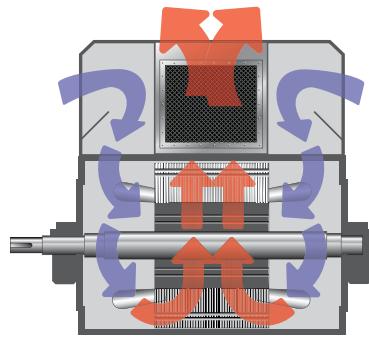

# Cooling & Power Range

Totally enclosed water-to-air  
cooled TEWAC / CACW

Totally enclosed air-to-air  
cooled TEAAC / CACA

Weather protected  
WPII, IC0A1

Dimensions above are in inches.

Note #1: motors with Shaft probes and/or keyphasors, BA dimension and total length (L) should increase 1 to 2 inches. Note #2: Main Terminal Box (MTB) is applicable for 4.16kV without accessories. For other voltages or MTB with accessories, refer to specific drawing. Note #3: Shaft height dimension will not be exceeded. When exact dimension is required, shims up to 0.06 inch may be necessary.

# Totally Enclosed Water-to-Air Cooled (TEWAC)

## Global manufacturing capability

GE has global manufacturing capability to meet local content requirement and help to reduce lead time and cost. GE's manufacturing locations across the globe provide capacity to address the growing demand for high voltage motors.

## Reducing risk, enhancing productivity

GE is a strong global partner, operating in 170 countries with 130 years of experience in energy infrastructure projects. Power Conversion services include all support for utilities and operators to protect assets, keep critical processes running, to help decreasing risk and enhancing productivity. We deliver original equipment spares

around the world as well as repair, refurbish and upgrade customer systems with the latest technology. We offer risk protection through performance-based contracts based on system experience and sophisticated application calculations. Through advanced digital platforms, we can deliver expert onsite and remote emergency 24/7 support, interventions and planned maintenance customized to meet unique requirements around the globe.

## Standard Accessories

- 2 RTD's per phase in stator (simplex).
- 1 RTD per bearing (simplex).
- Auxiliaries box steel IP 55. IP 56 under request.
- Space heater.
- Oil Pipes inlet position. Default Left side from NDE (both side provision). ANSI standard.
- Provision for Water Leakage detector for TEWAC cooler. Detector available under request.
- Provision for air filters (for WPII). Filters available under request.

- Provision for differential pressure switch (for WPII). Switch available under request.
- Water pipe & cooler position with respect to water inlet. Left side from NDE.
- Un-drilled gland plates.
- Fixation Kits (Bolt & Shims).
- Orifice plate at oil inlet.

Accessories are for safe area. Accessories for hazardous location are also available upon request.

## About GE Power Conversion

GE's Power Conversion business applies the science and systems of power conversion to help drive the electrification of the world's energy infrastructure by designing and delivering advanced motor, drive and control technologies that evolve today's industrial processes for a cleaner, more productive future. Serving specialized sectors such as energy, marine, oil and gas, renewable and industry, through customized solutions and advanced technologies, GE Power Conversion partners with customers to maximize efficiency.

## About GE

GE (NYSE: GE) is the world's Digital Industrial Company, transforming industry with software-defined machines and solutions that are connected, responsive, and predictive. GE is organized around a global exchange of knowledge, the "GE Store," through which each business shares and accesses the same technology, markets, structure, and intellect. Each invention further fuels innovation and application across our industrial sectors. With people, services, technology and scale, GE delivers better outcomes for customers by speaking the language of industry.
