

Digital control and regulation system HPCi with P80i: Maintenance

Seminar No : 564

Digital control and regulation system HPCi with P80i: Maintenance

Purpose

Participants learn to use the graphic engineering system P80i, and are able to implement and maintain solutions to complex control and regulation (open-loop and closed-loop control) problems using a HPCi configuration consisting of hardware and software

Prerequisite

- Basic knowledge of analogue and digital control system of automation projects in the field of industrial plants
- Basic PC and Windows knowledge.

Content

- System structure, concept and usage of the control and regulation (open-loop and closed-loop control) system HPCi
- Engineering of a control and regulation (open-loop and closed-loop control) system on a PC using the graphic engineering interface P80i
- Commissioning and maintenance of control and regulation (open-loop and closed-loop control) structures on the basis of HPCi systems
- Applications. Backup and version control
- Operation and exercises on the PC

Duration: 3 days

Number of participants : max. 8

Fees/ Dates:

See price list and time schedule.

Location

Global Technical Learning Center Berlin.

Time	
8:30 am	Approx 5:00 pm each day
Start	1 st day 10:00 am
End	5 th day 3:00 pm
