

FULL-SCALE SAFETY AUDIT

Comprehensive inspection for safe operation of your equipments

It is all about safety

Ensuring the safety of equipment and the work environment is paramount for smooth operations, making safety rules indispensable tools. Hence every industry spends a significant OPEX budget to avoid safety related accidents. As a customer centric approach, Power Conversion, a GE Vernova business with 125+ years of global industrial expertise, offers a full-scale safety audit to help to minimize the safety issues of the customers.

AUDIT CONSIDERATIONS ON STANDARDS & REGULATIONS

As a part of this audit, all the equipment will be checked for the relevant standards and regulations. Majorly, global regulations, state regulations, initial project standards and required standards will be assessed and the results will be highlighted under 3 categories.

- ✓ Non – compliance with initial standard/regulation.
- ✓ No compliance with current standard/regulation.
- ✓ Compliant but scope for improvement.

How do we do it?

1 GE expert visits your site and perform the audit as per standard protocols. The necessary data will be collected to analyze.

2 Site data will be analyzed.

3 You will receive a detailed assessment report with specific recommendations for improvements and hassle-free operation.

Benefits

- All the major conformities including arc flash, LOTO, earthing will be assessed, and priority wise recommendations will be given
- All the basic standards and regulations will be checked, and suggestions will be given accordingly
- Abnormal conditions such as missing/defective electrical, mechanical and fire safety will be assessed, and recommendations will be given
- Improvement solutions for extended security level will be suggested such as addition of audible signal for MV7 DC bus discharge, safety PLC, LOTO procedure, fire alarm control panel (FACP) and much more essentials
