## Overview

### Topics:

- [About Monitoring](#)

## About Monitoring

The Monitoring feature enables usage metrics tracking. When a user signs in to GE Digital APM, the actions for which usage metrics tracking have been enabled will be stored for that session and saved in-batch when the user signs out of GE Digital APM.

**Note:** Usage metrics are recorded only for activities performed via the GE Digital APM system. Usage metrics are not recorded for activities performed in the GE Digital APM administrative applications.

# Define Settings for Monitoring

## About This Task

You can define the settings for usage metrics tracking via the Monitoring feature, accessible on the **Operations Manager** page.

## Procedure

1. In the module navigation menu, select **Admin > Operations Manager > Monitoring**. The page for the Monitoring feature appears.

The screenshot shows the 'Monitoring' settings page in the Operations Manager interface. The page title is 'Monitoring'. Below the title, there are seven monitoring actions, each with a dropdown menu set to 'True':

- Log successful logins: True
- Log failed logins: True
- Log when password changed: True
- Log when user is activated: True
- Log when user is inactivated: True
- Log when user is modified: True
- Log when user is created: True

2. In the **Monitoring** section, in box for each action, depending on whether or not you want the action to be tracked, modify the value to **True** or **False**.

**Note:** Disabling the tracking of an action does not clear any previously saved actions. It only disables the collection of future data.

3. In the upper-right corner of the page, select . A confirmation message appears, indicating that the monitoring settings have been defined.
