About Monitoring

The Monitoring feature enables usage metrics tracking. When a user signs in to APM, the actions for which usage metrics tracking have been enabled will be stored for that session and saved in-batch when the user signs out of APM.

Note: Usage metrics are recorded only for activities performed via the APM system. Usage metrics are not recorded for activities performed in the APM administrative applications.

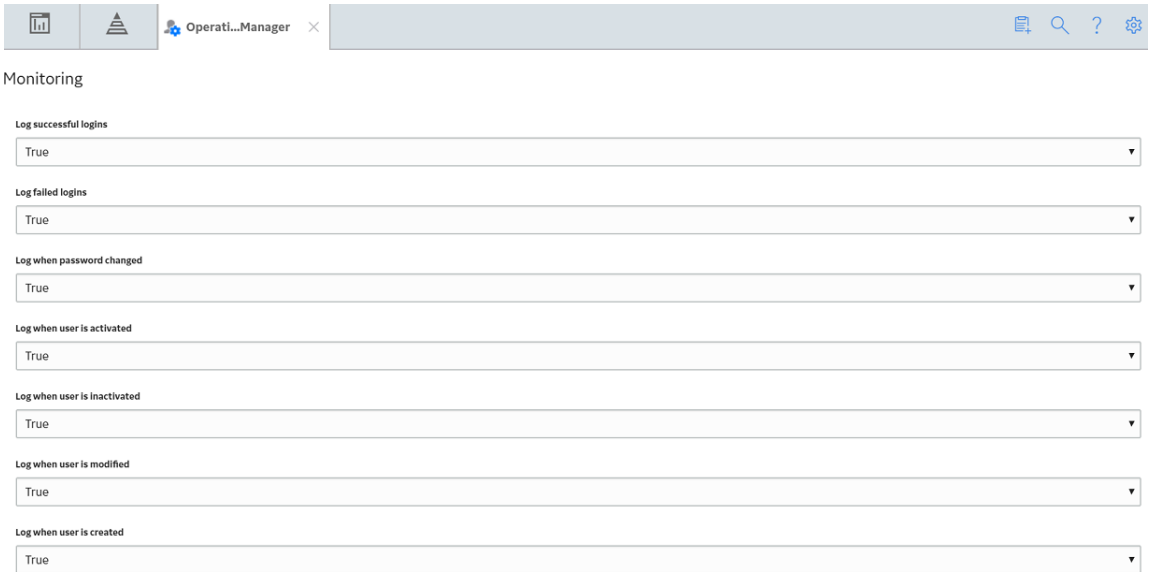
Define Settings for Monitoring

About This Task

You can define the settings for usage metrics tracking via the Monitoring feature, accessible on the **Operations Manager** page.

Procedure

1. In the **Applications** menu, navigate to **ADMIN** > **Operations Manager** > **Monitoring**.
   The page for the Monitoring feature appears.



2. In the **Monitoring** section, in box for each action, depending on whether or not you want the action to be tracked, modify the value to **True** or **False**.

   Note: Disabling the tracking of an action does not clear any previously saved actions. It only disables the collection of future data.

3. In the upper-right corner of the page, select .
   A confirmation message appears, indicating that the monitoring settings have been defined.
