

# BOOST RELIABILITY

Start every day with SmartSignal predictive analytics from GE Vernova and experience fewer surprises. Enhance reliability, efficiency, and reduce costs with insights from over 350+ Digital Twin blueprints.

Early warning of your biggest challenges delivers real ROI and reliability benefits across the enterprise.

## Unlock predictive insights with SmartSignal

Analytics for 350+ equipment types, featuring quick setup, and Digital Twins built to prevent failures, saving time and costs.

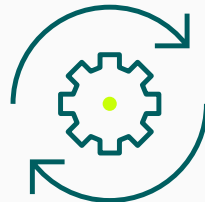

### Detect anomalies

SmartSignal identifies abnormal behavior by comparing real-time data with predicted norms, not fixed thresholds.

### Diagnostic analysis

Anomaly notifications are compared with precursor signatures to provide an apparent cause for each developing problem.

### Predictive analysis

Forecasts alarm limits and need for immediate action using advanced analytics.

### Unified dashboard

Visualize, analyze, and act on alerts; perform root cause analysis and track maintenance success.

## DISCOVER HOW

SmartSignal empowers your reliability and maintenance team to detect and prevent costly equipment failures.
